

Chapter – VI

SUGGESTIONS

Slum working women has become enough aware about education, health services, child rearing, family planning, methods about family planning and government development programs but still here is a wide gap between their condition and what ought to be their condition. So efforts have to be made by researchers, policy maker and extensions together to overcome these constraints. Some strategies which need due attention in the near future, are:

1. Slums are having very degraded physical structure, slum dwellers are facing the lack of basic amenities like safe drinking water, nutritional food, ventilated house etc. this situation become root Couse to spread diseases in slums. Authority can provide them required basic civic amenities.
2. Mostly women of Varanasi slum, worked in low paid sector because they are unskilled, so government/NGOs should provide them training and information regarding their skill upgrading in the area of food processing, basket making, typing and computer education.
3. Majority of respondents are illiterate so government should impart quality education to the women to the women and their children in slums through trained personal and provision of physical infrastructure like building, equipment books and useful material, need for adult education programs.
4. Provide them basic physical infrastructure such a sufficient street lighting facilities, transportation facilities because slum omen faced various type of security problems.
5. Public tap and toilet facilities should be provided and conduct awareness programs to both women and men to control the solid waste dumping into open drains.
6. To establishment of functional placement cell would improve the participation of women in skill development programs and provide them job security.

7. Most of the slum working women are having financial problems as their income is low. In this context, government has make scheme to health loan with zero (0%) interest during the major illness and facilitate slum women for better medical treatment.
8. Launch rehabilitation program such as providing effective low cost dwelling house with tiled / sheet roofs mode available in easy payable installment as long term basis.

All of the above suggestions are on the data and observation of scholar. These suggestions may become helpful to government, authority and NGOs work in the way of policy making and project implementation for slum working women.
